

Before Chapter 1

- Title Page
- Declaration
- Certification
- Dedication
- Acknowledgement
- Abstract
- Table of Contents
- List of Figures
- List of Tables

Summary/Abstract 5%

This is a summary of the entire project (usually written last but placed first).

- Background of the study
- Problem statement
- Aim of the project
- Methodology used
- Tools/technologies used
- Key results
- Conclusion

1. Introduction 5%

This chapter explains what the project is about and why it is important.

- Background of the Study
- Problem Statement
- Aim of the Study
- Objectives of the Study
- Research Questions (optional)
- Significance of the Study
- Scope of the Study
- Limitations of the Study
- Organisation of the Report

2. Literature Review 10%

This chapter reviews existing research, systems, and technologies related to your project.

- Conceptual Review (concepts related to the project)
- Review of Existing Systems
- Review of Related Technologies
- Review of Methods/Algorithms/Models
- Gaps in Existing Systems

- Summary of Literature Review

Use citations and references (APA format if required).

3. Methodology and System Design 10%

This chapter explains how the research and system development were carried out.

Research Methodology

- Research approach (Design Science, Experimental, Survey, Case Study)
- Data collection methods (Questionnaire, Interview, Dataset)
- System development methodology (Agile, Waterfall, Scrum, RAD)

Requirements Analysis

- Functional Requirements (what the system should do)
- Non-Functional Requirements (performance, security, usability, etc.)
- User Requirements / User Stories

Tools and Technologies Used

- Programming language(s)
- Frameworks/libraries
- Database systems
- Development tools (e.g., IDEs)

System Design

- System architecture diagram
- Use case diagram
- Database design (ERD)

Add 2 – 3 of the following:

- Activity diagram
- Sequence diagram
- Class diagram
- Input design
- Output design

Algorithm / Model Description

- Algorithm / Pseudocode or flowchart

Data Description / Dataset (if applicable)

If your project uses data:

- Source of data
- Size and format
- Preprocessing steps

Validation or Testing Plan:

- How the system will be tested

- Types of testing (unit, integration, user testing)

Ethical Considerations

- Data privacy
- Consent (if human data used)
- Security considerations

4. System Implementation, Testing and Results 15%

This chapter shows how the system was built and whether the system works correctly and meets objectives

- Development environment
- Programming language used
- Tools and frameworks used
- Database implementation
- System modules
- Interface design
- Screenshots of the system
- Explanation of major code modules
- Test plan
- Test cases
- Test results table
- System performance results
- Evaluation of the system

5. Discussion, Conclusion and Recommendations 10%

This chapter explains what the results mean, the contribution of the project and suggestions for future work

- Summary of findings
- Interpretation of results
- Whether objectives were achieved
- Comparison with existing systems
- Advantages of the new system
- Challenges encountered
- Implications of the study
- Contribution of the project
- Improvements for future work

References 5%

- All sources cited in the literature review
- Use e.g., APA referencing style
- Books, journals, websites, conference papers

Appendices

This section contains supporting materials.

Examples:

- Questionnaire
- Interview questions
- Source code
- System screenshots
- Test cases
- User manual
- Gantt chart
- Budget
- Additional diagrams

A. Jury award for the artifact 40%

B. All projects should be submitted with similarity index (plagiarism) and AI content reports.

C. The similarity index and AI content should not be more than 20%.
